Glossary

Indicator	Definition
Infection rate per 100,000	An infection rate is the probability or risk of an infection in a population. It is used to measure the frequency of occurrence of new instances of infection within a population during a specific time period. Calculation: (lab-confirmed case count/Enfield resident population) *100,000.
Number of tests conducted per 100,000 population	Calculation: (count of Pillar 2 tests conducted/Enfield resident population) *100,000.
Positivity rate of Pillar 2 testing	Calculation: (count of tests with positive Pillar 2 results/count of pillar 2 tests conducted) *100,000.
Number of cases in Pillar 1 & 2	Cases: Lab-confirmed case count; a lab-confirmed case is when a tested specimen is returned positive. Duplicate tests for the same person are removed therefore lab-confirmed cases are counts of people. This is a count of people NOT TESTS. Pillar 1: swab testing in Public Health England (PHE) labs and NHS hospitals for those with a clinical need, and health and care workers. Pillar 2: swab testing for the wider population, as set out in government guidance.
Number of cases with no contacts	Count of COVID-19 cases as identified via NHS Test and Trace that were recorded as having 0 contacts.
Number of cases with contacts	Count of COVID-19 cases as identified via NHS Test and Trace that were recorded as having contacts.
Number of positive Pillar 2 tests	Count of tests with positive Pillar 2 results; this can be duplicate testing.
111/999 triages	Data about the rate of calls to these services relating to coronavirus; this data is based on potential COVID-19 symptoms reported by members of the public to NHS Pathways through NHS 111/999 and is not based on outcomes of tests for coronavirus. This is NOT A COUNT OF PEOPLE.
Exceedance (Observed Vs Expected)	Observed: the observed count of lab-confirmed COVID-19 cases within a given period. Expected: the expected number of lab-confirmed COVID-19 cases within a given period as defined by regression modelling.
Number of Pillar 2 tests conducted	This is a count of the total number of valid tests conducted (positive, negative and void) on a particular specimen where the date the test was taken is available and plausible, where the upper tier local authority is in England, and where valid postcode is recorded.
